EXPERIENCE

Indux Technology

Feb 2026 – Present

Full Stack Developer Intern

Pune

- Optimized mobile rendering performance for **Indux CRM** by implementing a view-recycling list architecture, successfully resolving memory bottlenecks and UI freezing for large datasets.
- Restructured API pipelines in **Indux CRM** to request selective graph fields, reducing network payloads, and engineered asynchronous backend workers for real-time alerts and automated report generation.
- Engineered the data validation and state management layer for the **MagikPro** and **Nutrinative** platforms, ensuring strict schema enforcement and secure data separation across multiple storefronts.
- Developed custom data transformation logic for the **MagikPro** admin dashboard, aggregating raw transactional database queries into interactive analytics visualizations.
- Tech Stack:** TypeScript, React, Next.js, React Native, Node.js, Express, GraphQL, MongoDB, Socket.io

PROJECTS

Petty Revenge Note [GitHub](#) | [Live](#)

March 2026 – Sept 2026

- Developed a full-stack platform with **2 Next.js frontend applications** (Public Client & Admin Dashboard) connected to a containerized **Node.js/Express API** via **Docker**.
- Implemented **MongoDB ACID transactions** to execute cascading data deletions across **5 related collections**, maintaining strict database consistency and preventing orphaned records.
- Configured **Redis** to manage distributed **API rate limiting** and implement **optimistic locking** for email **OTP verification**, securing auth flows against concurrent requests.
- Optimized backend read performance by denormalizing counter fields via **\$inc** operations, achieving **O(1) database queries** for the **infinite scrolling** feeds.
- Built an **Admin Control Panel** featuring global system overrides for **maintenance mode** and **registration blocking**, alongside user moderation (banning) and comprehensive **audit logging**.
- Hardened API security by configuring **Helmet** for HTTP headers, **Morgan** for request logging, and **Envalid** for strict boot-time environment validation.
- Tools Used:** Next.js, Redux Toolkit, Node.js, Express, MongoDB, Redis, Docker, Tailwind CSS

Cypher Sight [GitHub](#) | [Live](#)

Dec 2025 – March 2026

- Built a full-stack cryptocurrency portfolio tracker using the **MERN stack**, integrating **Binance WebSockets** to process live market data streams and deliver **sub-second** asset valuations.
- Architected an asynchronous background job processing system using **Redis** and **BullMQ** to offload heavy third-party API polling to dedicated worker threads, preventing main-thread blocking and improving API response times.
- Designed a robust **Node.js REST API** to compute complex FIFO (First-In-First-Out) cost basis and realized/unrealized PnL, utilizing **Zod** to enforce strict chronological validation across thousands of transactions.
- Implemented an optimized frontend caching architecture using **Redux RTK Query**, reducing **CoinGecko API** consumption by **80%** and circumventing aggressive rate-limit throttling.
- Tools Used:** React.js, TypeScript, Redux Toolkit, Node.js, Express, MongoDB, Redis, BullMQ, Tailwind CSS

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React.js, Next.js, Redux, Redux Toolkit, RTK Query, Bootstrap, Tailwind CSS

Backend: Node.js, Express.js, REST API Design, JWT Authentication, CORS, HttpOnly Cookies, BullMQ

Databases: MongoDB (NoSQL), Mongoose ODM, Redis

Tools & Platforms: Git, GitHub, Docker, Postman, Linux, Vite

APIs & Integrations: CoinGecko API, Razorpay Payment Gateway

CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming (OOP)

EDUCATION

MET Institute of Technology

Aug 2022 – Jul 2025

Bachelor of Technology in Computer Science & Design

Sandip Polytechnic

Jun 2019 – May 2022

Diploma in Mechanical Engineering
